Miraceli Bonjardim

Data Scientist

Joinville, Santa Catarina, Brazil

Summary

I've been working with data for a few years. My experience ranges from data analysis and BI to data integration, engineering, and data science. This helps me understand the entire process more clearly, from data extraction and preparation to generating insights.

I've built a solid foundation in data analysis, statistical modeling and machine learning, with hands-on experience in data manipulation, pipeline development and model evaluation.

On a daily basis I work with Python and libraries like pandas, numpy, scikit-learn, and tensorflow. I use SQL with databases like PostgreSQL, and also work with NoSQL tools like MongoDB and Redis. I've also worked with tools such as Airflow, DBT, MLflow, RabbitMQ and Docker across different projects.

I'm currently pursuing a Master's in Applied Computing, focusing on time series forecasting using machine learning and data imputation techniques.

Experience

Strokmatic Innovation Technology

Data Scientist

March 2024 - March 2025 (1 year 1 month)

- Scrum Master for the Smart Die project, supporting the Product Owner with sprint planning and reviews using Agile methodologies. The project aimed to apply artificial intelligence for IoT solutions in the automotive industry.
- Managed MLflow pipelines to track experiments and optimize machine learning models for the Smart Die project. Additionally, developed dashboards using Streamlit and Superset to automate reporting and provide data insights, speeding up exploratory data analysis.

- Developed and implemented machine learning models for the Smart Die project, achieving an average accuracy of 96%. Utilized Scikit-learn and Pandas to preprocess data and build models.
- Designed, documented and built a real-time data streaming pipeline using Python, MongoDB, Redis, RabbitMQ, Docker, and GCP Cloud for the Vision King project, which focused on computer vision for IoT solutions in the metallurgical industry. The pipeline achieved a data processing rate of 3000 data points per second.

Livon

Data Analytics Engineer

June 2023 - February 2024 (9 months)

Joinville, Santa Catarina, Brasil

- Developed BI dashboards using Superset to provide insights to healthcare clients.
- Developed APIs endpoints using Django and ORM for application-to-data warehouse interactions in a cloud environment (AWS Redshift).
- Collaborated with the front-end team to implement system modules using Vue.js, integrating with Django APIs and PostgreSQL.

Gedanken - GCertifica

Data Analytics Engineer

April 2022 - May 2023 (1 year 2 months)

Joinville, Santa Catarina, Brazil

- Worked closely with the Account Manager to translate and gather business requirements from over 5 new clients.
- Developed advanced SQL queries, functions, and triggers for the development team.
- Managed and optimized PostgreSQL database query performance, using optimization techniques to reduce query response times by up to 20% in complex queries.

Inboarding

Machine Learning Engineer

May 2022 - October 2022 (6 months)

Joinville, Santa Catarina, Brazil

CNPq scholarship holder, in the SET-G modality, to work on the project "The impact of artificial intelligence to promote diversity and inclusion in the workplace".

During the project, developed by the startup Inboarding, I worked as a CNPq scholarship holder in the role of Machine Learning Engineer. I had the opportunity to research and study AWS SageMaker and implemented an API capable of labeling words in a text with their grammatical category.

Nec Plus Ultra - NPU

Data Analyst

September 2021 - February 2022 (6 months)

Florianópolis, Santa Catarina, Brazil

- Analyzed data extracted from the ERP Sienge, a system specialized in the construction industry, and implemented Business Intelligence dashboards for two clients.
- Developed APIs in Java to extract data from the system and load it into a PostgreSQL data warehouse.

Giver

Data Integration Analyst

May 2021 - September 2021 (5 months)

Joinville, Santa Catarina, Brazil

- Restructured team task prioritization and redistribution, defining a new execution order for tasks, which led to a significant reduction in delivery SLA. The reorganization eliminated the backlog of tasks, improving efficiency and reducing idle tasks.
- Documented approximately 60% of team operational procedures and processes, providing greater clarity and agility in data integration activities.
- Maintained SQL scripts and optimized queries across multiple relational databases, such as PostgreSQL, MySQL, SQL Server, Oracle, and Firebird.

Ambiental Limpeza Urbana e Saneamento Ltda

Business Analyst

November 2019 - May 2021 (1 year 7 months)

Joinville, Santa Catarina, Brazil

- Optimized operational processes by automating reports in PowerBI and developed a certificate issuance system that reduced document generation time from 15 minutes to 3 minutes.
- Designed the workflow for 3 operational procedures using Business Process Model and Notation (BPMN) and led a project to integrate two management systems to reduce rework in these processes.

- Successfully implemented a new omnichannel customer service system, integrating email and WhatsApp channels to enhance customer support efficiency.
- Wrote the first security policy documentation for over 2,000 company employees based on ABNT NBR ISO 9001 and LGPD, which was approved and signed by the Compliance Board.

VarejOnline - Sistema de Gestão Empresarial

Test Analyst

April 2019 - October 2019 (7 months)

Joinville, Santa Catarina, Brazil

Internship at Varejonline, a company focused on ERP systems for the retail sector. Worked on manual and automated testing, bug tracking, and quality improvements. Developed BDD tests using Ruby, Capybara, Cucumber, and Jenkins. Also prototyped UI screens in Adobe XD with Angular components.

BRLOGIC

3 years 3 months

Support Technician

March 2018 - January 2019 (11 months)

Joinville, Santa Catarina, Brazil

Online technical support and customer service via chat, helpdesk, email and telephone; install and update applications on Google Play; register and renew website domains.

Sales Analyst

November 2015 - February 2018 (2 years 4 months)

Joinville

Online customer service via chat, helpdesk, email and phone; approach leads and demonstrate to potential customers the product differentials; collaborate to find ways to improve sales performance.

i9 - Núcleo Estudantil de Inovação Tecnológica

Volunteer

March 2012 - March 2013 (1 year 1 month)

Joinville, Santa Catarina, Brazil

Promote meetings and lectures on innovation and entrepreneurship; seek new innovation tools; update the student nucleus website with news, ideas and interviews about technology and innovation.

Education

Universidade do Estado de Santa Catarina

Master of Computer Applications - MCA, Artificial Intelligence · (February 2024 - December 2025)

Universidade Federal do Paraná

Pós-graduação Lato Sensu - Especialização, Inteligência Artificial · (February 2023 - October 2024)

Universidade do Estado de Santa Catarina

Bachelor's degree, Systems Development Analysis · (2017 - 2021)

Udacity Brasil

Nanodegree, Marketing Digital · (2017 - 2017)

Universidade do Estado de Santa Catarina

Bachelor's degree, Electrical and Electronics Engineering · (2011 - 2013)
